

Dear Sir/Madam,

I am applying for the position of Intern Software Engineer.

Autodesk attracts me due to the large amount of interesting projects and software developed at the company, such as Maya. It would be a great prospect to work on these projects which are in practical use every day by a large number of people. This appeals to me as it would give me the opportunity to put my skills to the test in commercial software where quality of code and writing correct code is a paramount concern.

I am suited for the role since I already have experience in development which would provide a good foundation to build upon. My existing knowledge includes various programming languages and methodologies, but I am strongly motivated to keep learning. This will greatly compliment being mentored by experienced Autodesk developers. I also have achieved the entry requirements of being on track for a first class degree as well as having 300 UCAS points.

I have been able to develop my interpersonal skills over the past couple of years working in a customer-facing role. I had to come up with helpful solutions for customers and ensure they were satisfied. As a result, I feel I have managed to become more effective at communicating as well as dealing with stressful situations, which would be important skills to have when working in a team which is developing large software.

Thank you for your time and consideration. I would be greatly interested in discussing this position further.

Yours sincerely,  
Brendan Hart
